THE HISTORY OF THE INFANTRY DRILL REGULATIONS

OF THE UNITED STATES ARMY.*

By Noxon Toomey

Before the years of the Revolutionary War the British colonies in America supported royal militia companies modeled on the plan of the Militia of England. By a Royal order of 1764 these companies were poorly instructed in the infantry drill of the British regulars (1) which was adapted from the regulations of the Prussian infantry. The Prussian drill was devised by by Leopold I., Frince of Anhalt-Dessau, who taught it to the regiments of Frederick the Great and made of them a well drilled army. The militias of the provinces of Massachussetts Bay, Connecticut and Rhode Island were instructed in the tactics of the Norfolk militia of 1759.(2) The Norfolk tactics was the drill of the old train bands and in them one finds for the last time the manual of the halberd and and pike.(3)

Such training the Continental armies had was in the British drill and not until the spring of 1778, at Valley Forge, were they drilled by Baron von Steuben.** practical work of Steuben resulted in his publishing his Regulations (4) in 1779. These Regulations were not a translation of the Prussian tactics, as frequently stated, but were an adaptation based on the Prussian drill. They were made official by the Continental Congress on March 29, 1779. In 1792, after Congress had authorized the Army of the United States, it made Steubon's Regulations the official drill systom for it, but militia regiments were permitted to use any drill system. Stouben's plan of drill remained official for the regular army until March 30, 1812 when they wore superceeded by Smyth's tactics. However, Steuben's Regulations were followed by the larger part of the regular army until 1815 and by part of the militia until 1820. Stcuben's Regulations were out of print by 1808 and from that date until the close of the second war with England there was no uniformity in infantry drill, as several difforent systems were in use. The characteristics of Steuben's plan of drill was the omission of all that was not practical and useful, and the providing for a greater openness of movements and formations during combat. He found that the Continental soldiers had discarded their bayonets as of no value. Due to his teaching of the use and value of the bayonet, Stoney Point was later taken by a bayonet charge, not a shot being fired. He stopped the men from taking home their muskets as keepsakes and insisted upon the proper care of accoutrement.

The first of the unofficial systems to be introduced was the French system of 1791 *** as modified by Napoleon in 1805. The Napoleonie system was introduced by Nac Denald who published in 1807 a quite poor translation of the French tactics(5). This translation was republished in 1809 by Licut, Col. William Duane, of the Rifles, in his American Filitary Library.(6) A somewhat corrected edition was published in Boston by Colonel De Lacroix in 1810.(7) A work published in Boston in 1811 by Gen.

* Only two articles have been published on the history of the United States Infuntry drill:

- 1- The History of our Tactics. An unsigned editorial in the Army and Navy Journal, February 11, 1888.
- 2- History of the Drill Regulations. A brief note appended to the Army and Navy Journal edition of the drill regulations of 1891.

Isaac Maltby mot with some favor in Massachussetts.(8) Smirk's "Review of a Battalion" was also used in this country(9). At the outbreak of the War of 1812 Colonel Alexander Smyth, Inspector-General of the Army, published a set of drill regulations (10) at the request of the Secretary of War. Smyth's work was a good improvement and abridgement of Mac Donald's translation of the French tactics. On March 30, 1812 they were ordered to superceed Steuben's tactics in the regular army. In the Same year way published a second edition of the work to which Smyth put his name. This system was probably used somewhat up to 1815 although Duane's Handbook was made regulation on 1%. March 19, 1813.

In the "Hand-book for Infantry"(11) of William Duane, a former editor, we have the work of an enthusiast who undertook to diffuse military knowledge in America.**** His system of drill was largely original and at first incomplete. Tho first part was finished in 1808 but not published until 1812, after it had been woted on favorably by the House of Representatives. While his system was under consideration by the Sonate Colonel Duane promised its completion. It was then made the regulation drill for the army by a General Order of the War Department on March 19, 1813. The system was completed in 1814 but the War Department order had done little to spread its employment, as only four regiments of regulars and some of the Virginia, New York, Jersey, and Pennsylvania militia used it. A small book based on Duane's first publication was printed in South Carolina. Duane's plan of drill met with much opposition due to politics, and because it was impractical, it resembling a fancy exhibition drill.

In 1813 Congress, either uninformed of the official status of Duane's tactics or considering them unsuitable, passed a resolution requesting the President "to cause to be prepared and laid before Congress, as soon as practicable, a military system of disciplino for the infantry of the army and militia of the United States". Owing to the occupation of all the principal officers with the war, no action was taken on this resolution, and every tactical officer continued to use the system he preferred. The real step towards training the army was made in 1814 when Major Goneral Scott instructed in person the two brigades of Brown's division in camp at Buffalo. He used an edition of Mac Dodald's translation of the French tactics, probably Smyth's abridgement, and a copy of the original French with which to correct them. It was to that instruction that the victories which followed are ascribed. This was our first extensive use of the French drill. In December 1814, Congress, by resolution, asked for their revision, to adapt them to the requirements of our army. A board was appointed for this purpose, consisting of General Scott; General Swift, Chief of Engineers; Lieut-Col. J.R. Fenwick, of the Artillery; Col. William Cumming, Adjutant General; and Col. William Drayton of the 18th Infantry. The French tastics as modified by this board and ordered as regulation by the War Department on Feb.28, 1815, are known as the "system of 1815"(12). Several states passed laws adopting the system for their militias.

Previous to 1816 companies were known by the names of their captains, which were constantly changing, and so creating confusion. At the suggestion of Col. C.K. Gardiner, the present plan of designating the companies by the letters of the alphabet was introduced. Another important improvement was ordered May 12, 1820 when Congress passed an act requiring the militia to conform to the drill regulations of the United States Army.

The edition of the system of 1815 becoming exhausted another board was ordere ed in 1824. This board consisted of General Scott, Col. Hugh Brady, Col. John R. Fenwick, Capt. Wm. J. Worth, and Sylvanus Thayer. The drill regulations these officers drew up differed from the regulations of 1815 in only minor matters such as slight changes in some commands, the posting of officers and noncommissioned officers, the placing of one of the light companies on the left flank as a rifle company, converting the right flank company into grenadiers, and a few other changes. The board, however, annotated the work with so many "remarks" that the manual was expanded into two large volumes. These tactics were transmitted to the War Department on Dec. 15, 1824, and was ordered the regulation drill on Jan. 5, 1825.(13) As the drill manual

This beard finished an abstract of the larger work on Dec. 5, 1826. Their abridgement was later published for the use of the militia.(14)

Although the French tactics that our army had used, with several modifications, since 1812 were accepted as satisfactory, the French in 1827 resolved upon a modification of their tactics and they established a camp for experimentation at St. Omar. Guibort's work resulted from the experiments, and its publication in France in 1831 was followed by an Act of Congress (April 8, 1834) authorizing another revision of our infantry drill. Again General Scott was called upon and on Feb. 3, 1835 ho gave to the War Department the drill tactics that were made regulation on April 10, 1835, (15) and were known by his name until largely superceeded by Hardee's tactics in 1855. Scott's drill required a very stiff set up; its slow and formal movements were dignified but wearisome. Besides making a few minor changes in posts and commands, Scott sized the company from right to left in place of the previous custom of putting the tallest men in the rear rank and sizing equally from both flanks. Scott's drill required froquent countermarching by column closed in mass, which he had substituted for the moving of alternate columns by flank outside of the column, and then making the countermarch. This frequent counter marching did not afford that openness and cclerity of movement which the FFench later found necessary from their experiences in Algiers. Scott revised his tactics in 1839 but the improvements in firearms finally compelled a change from the near goose-step of his drill. As the result it was ordered that Brevet Lieut .- Col. William J. Mardeo, major, 2d Cavalry, would fire pare a modification of the tactics for the French chassours-a-pied (ordinance of 1845).

From the peculiarity of its double quick step Hardeo's Tactics wore known as the "shanghai drill". They tended to a greater individualization of the soldier and introduced a greater freedom of movement, but adhered to Scott's tactics in the principles of formation. The old method of obliquing, adapted only to mon with one leg shorter than the other, was changed to the more rational half-face method. The rightabout while marching, firing by ranks, and the comrades in battle principle were also introduced. Harch 29, 1855, Hardeo's Tactics were ordered to replace Scott's but only as far as to include the school of the battalion.(17) At the outbreak of the Civil War Hardeo joined the Confederacy and his tactics were used by the Confederate armies throughout the war. During the first year and a half of the war the Federal troops, under an order of Hay 1, 1861, used an exact reprint of Hardeo's work, which did not however mention his name.(18)

The methods for hancouvering regiments and brigades in combat as provided for by Scott were no longer used as they had become obsolete. Since the reprint of Hardee's Tactics did not provide for regimental or brigade movements, two works on the evolutions of the line were published unofficially, one by Duffield and one by Coppee. (20) This lack of satisfactory methods for brigade movements caused the War Department to order, on Aug. 11, 1862, the adoption of the Infantry Tactics of Brig.-Gen. Silas Casey.(21) Gen. Casey had been the president of the board that approved Hardee's Tactics in 1854, and in his new work he retained Hardee's schools of the soldier and of the company. He effected only a few changes in the school of the battalion, as the War Department would not authorizo his plan of skirmish or covering compa nies. In his movements for larger forces he made the brigade the tactical unit and introduced the deploying on heads of columns as the means of forming line of battle.

Casey's drill regulations were superceeded by General Upton's system on August 1, 1867.(22) Upton modeled his tactics upon the foot drill of the artillery prepared by Barry and Hunt. In this drill inversions were dispensed with and the squad of four files was introduced. The all important movements in Upton's plan were the double wheelings or turnings by fours. Upton's plan of drill contained several innevations of value such as the introduction of bayonet exercises, platoon movements and the deploying as skirnishers from column. In it we find many of the essencials of our present drill. Unfortunately the descriptions of movements as given in the first edition of Upton's text were not lucidly written. The ambiguities necessitated many official interpretations, and most of his text underwent minute dissection and had been made too volumineds for the use of inflicers another learning an urdered Cot. 5, 1826. This bears fieldhed an intract of the larger verb or Dec. 5, 1926. Their abritgement was inter published for the use of the cilitic.(10)

Although the French tratics that our arey but would, with several modificantions. since 1812 wore accepted as satisficatory, the french in 1837 resolved upon a radie Fication of their tactics are they outablished a comparimentation (s. 34 Ocar. Guibert's work resulted from the coperiments, and ats sublicedies in Frence in 1631 was followed by an Act of Congress (April 8, 1080) auchorizing another cavitien of our infantry drill. Again General Soots and colled upon ere on For. 5, 1885 to gave to the Ray Department the drill faction that three while resultances on April 10, 1839, (15) and wors known is this move which largely equipered of it larded to have in 100 Scott's drill required a very dusif not up its and ferral revents on the fied but wearisene. The old method of a barrentian, which address to all the solution of formation. The old method of a barrentian, and address to all the solution of formation. The old method of the solution, and that was barrentian, and the context was a solution at the solution at the other, was an address and the context with a method. The solution at the solution of the solution at the solution of the solution

The methods for manecuvarian regiments and irrigates in coulds as prevised of here by Scott version longer used as they had become absolutes. Since the reputator of here dee's factics did not provide for regimented or bragade movements, two versas of the ovelutions of the line were published verificially, one by Buffacid and and be to the (CO) This lack of satisfactory methods for brights revenants caused the here to to the ment to order, on Aug. 11, 1862, the adoption of the fatanty faction of the frightsiles Casey. (21) Gen. Casey had been the president of the board that approximate dee's faction in 1854, and in his new work to revente distance of the to the dier and of the company. He effected only a for elements in the second of the total ion, as the War Bepartment reald not subsched by and the bright of the parties. In his movements for larger for subsched the bright of the ard introduced the deploying an heads of solutions of the bright of battle.

Casey's drill regulations ware suspendeded by General Weben's avecau on Angust 1, 1867.(22) Upton medeled his tackies upon the foot duil of the artitlery presared by Barry and Hunt. In this drill inversions rate displaced rath and the equal of four files are introduced. The all impertant conclusts to Upton's plan word the dauble cheelings or turnings by foural Upton's plan word the invertions of value such as the introduction of organal currations of while concluse and the david car of the backies from one of any one of the concluse and the david such as the introduction of organal currates gladee or mathe and the david the such as the introduction of organal currates gladee or mathe and the david such as the introduction of organs of the second all and the david such as the introduction of the the organic field the second states of the test and the david the second states are the intersections of the test over the description. The mathematics are a solution in the organiculation are the second of the second states of the intersection of the four type of the david of the second test in the organical area of the time and the organic of the second test in the organical area and the second test of the second test in the organical area and the test of the last of the second test of the second test in the second test of the se criticism. Following the work of the Board convened in 1869 at Fort Leavenworth, to standardize the drill of the three line services, Upton published in 1873 a revision of his drill regulations. This revision chiefly effected a simplification in the turnings by squads, and his close order drill continued to draw-forth many suggestions for its improvement. At the time of his death in 1881 Upton had nearly finished a second revision. This revision, completed by General Alexander, was laid board, convened in Washington, D.C. in February, 1888, to revise the drill of the light artillery, infantry and cavalry. Probably from Upton's last revision was adopted the twelve company-three battalion regiment, movements by sections of two squads, and mass formations in battalion movements. After working for three years this Board composed a system of infantry drill that was ordered by the Secretary of War to supercoed Upton's tactics on Oct. 3, 1891.

The tactics introduced in 1891 proved to be quite satisfactory and constituted the main part of the drill regulations that were in force during the Spanish-American war and the Fhilippine insurrection. The board that prepared these tactics was composed of Licut .- Cols. J.C. Bates and G.B. Sanford, Majors H.C. Hasbrouck and John C. Gilmore, Capts. J.T.Hashell, B.S.Godfrey and J.M.Lancaster, and Lieuts. G.Andrew and J.T.French, Jr. as recorders. The new drill system did not depart from the general character of Upton's tactics but introduced the following inprovements: a lengthening of the step from 28 to 30 inches and a quickening of the cadence from 110 to 120 per minute with abolition of the old common time (cadence of 90 per minute). In the manual of arms the method for inspection of arms and for the stacking of arms was changcd, and "rest on arms" and "reverse arms" were omitted, and "sling arms" was introduced. The number of setting-up exercises was increased. The hand salute was made the same for officers and men except that officers were to habitually salute with the right hand (unless engaged) instead of the far hand. The salute was also made shorte er and simpler. As "target practice" had been made the subject of a special manual it was dropped from the drill book. In extended order drill, signals were introduccd and the principles of minor tactics were discussed more fully. Skirmish movements were simplified, particularly deployment and rallying, and the section two squads was introduced as a unit. In the evolution of larger commands the old "close column" was expanded into mass formations. Divisional and almost all formal brigado movements were omitted.

Up to 1895 the interpretation of the new regulations had given rise to no real difficulties and theyhad required no changes. However, when the Old Springfield rifle was replaced by the Krag-Jorgensen rifle in 1895, a new manual of arms became necessary, so a suitable manual was made official on June 17, 1895. In this new manual "carry arms" was omitted, "right shoulder arms" was made to correspond with the old "left shoulder arms", bayonets were fixed and unfixed in a different manner, the rifle salute at the carry was replaced by the old "sergeant's salute" with the piece at the shoulder. There were minute changes in the other positions of the piece, particularly "secure arms". Cwing to the rifle having a magazine, the movements of "open chamber" and "close chamber" were introduced for the purpose of inspection. Due partly to the bolt mechanism of the rifle the commands for loadings and firings were greatly changed. With the advent of modern field crtillery and the necessity of employing United States troops against forces armed with the Mauser rifle it was found that the regulations for extended order formations should be revised. As a result an improved set of skirmish formations was published officially by Gen. Thomas H. Ruger in 1898.(24)

Shortly after the beginning of the Twentioth Century, the introduction of the Springfield rifle, model 1903, the changes in equiptment, tentage, etc., and the changes in minor tactics and tactical organization necessitated a new system that would incorporate previous changes and the newer requirements. Accordingly in 1902 the Chief of Staff directed a special section of the General Staff to prepare a revision of the infantry drill. This revision was thorough and practical and it was not accepted and made official until June 23, 1904. This manual differed greatly in appearance from the drill book of 1891, but it was made up largely of the fermer drill modified by the manual of 1895 and Ruger's extended order drill. The noteworthy changes that it introduced were due to the new rifle, and to the new method oriticars. Following the verse at the device over and the 200 Public over obsectordized the formation of a large service of Words and the address of of the device the formation of a large service of Words and the address of a for the device the formation of a large service over the service over for the improvement. for effecting turnings and wheelings by the men of an element obliquing as separate echelons into line instead of the element swinging as a whole, like a barn door. Bayonet exercises were dropped and the setting up exercises were reduced from seventeen to six, due to the introduction of Butt's physical drill. For purposes of instruction there were introduced "in place halt", "as you were", "resume march" and "to the rear march", while the methods for marking time, kmeeling, lying down and rising were slightly improved; but "right forward, fours right" was discontinued. Just prior to 1904 the notion that the bayonet was no longer an efficient weapon gained official credence. For this reason, and the desire to lighten the soldier's equiptment, the knife bayonet was replaced by a worthless rod to be pulled out of the barrel casing for use as a bayonet. This mistake was corrected in April, 1907 when the manual of 1904 was changed to provide for a new knife bayonet.

By 1911 the studies of the General Staff had effected marked improvements in organization, equipment, and in troop control under fire. These changes required a revision of the infantry manual to provide for the new pack, etc., the new organization in close and extended order and the fuller and more rational discussion of minor tactics. In t he regulations for infantry drill made official on August 19,1911 we have the present drill regulations as modified a little during the past few years. In these latest regulations we find that the formal movements, ceromonies, etc. are improved but that they are almost overshadowed by the prominence given to combat principles.

Following modern tactics, the regulations of 1911 do not prescribe movements for brigades, and regimental drill is reduced to a few formations for ceremonics and close order movements. The close order drill of 1904 has been improved by the reintroduction of "right forward, fours right" (right by squads), by the full step being taken up automatically as soon as a unit has completed a turn or a wheel, and by file closers being posted close in to that flank towards which a line of squads has formed column. Right by twos or files and their roverse have been improved; and opening and closing ranks are no longer required except for inspection of equiptment. Commands have been somewhat simplified, and more emphasis has been placed on signals. The company has been enlarged and provision has been made for four platoons, with a consequent reposting of plateon leaders and guides. In the manual of arms "sling" and "secure" arms have been omitted and "inspection arms","left shoulder arms" from right shoulder, "fix bayonets" and "charge bayonets" have been changed. The position of the soldier has been made more natural, and the about face for officers was extended to enlisted men. In extended order, deployment has been changed and new methods for advancing -- by thin lines, and column of files -- have been introduced. The interval in extended order has been reduced from two paces to a half pace, and the rally has been omitted. The normal squad may have a number of additional mon. Fire control has been changed somewhat. A sleeping bag made of the new ponche was described, and a new shelter tent with poles replaced by riflos was prescribed (modified Sept. 1/14). Due toothe introduction of the new pack, model 1910, inspection of equipment was changed (amended Aug. 1916). Provision was made for a mounted detachment and a machine gun company. A modernized manual of the bayonet was prescribed February 20, In 1913 the salute was restricted to the right hand and when covered, but C. 1913. I.D.R. No.18, Jan., 1917 has reintroduced some of the previous methods of saluting. hany bugle signals have been replaced by arm signals (supplemented May, 1916); and since 1914 the whistle and code signals have been changed several times and the arm somphore introduced.

Summary: The changes in drill during the past century and a half center about the increasing effectiveness of arms and the resulting growth of skirnish formations. This extended order began with the old rifle companies but was not developed until after the Civil war; it reached its maximum tenuity following experiences in the close country of Cuba and the Philippines, but it now consists in a more compact line(s) whose fire and discipline can be better controlled. The regimental units were frequently increased in size causing an increasing difficulty of control in skirmish formation, hence the tactical unit passed from the brigade to the regiment-then to the battalion. There necessarily developed a system of signals, first by trumpet, later by arm, flag and whistle. Close order drill slowly progressed from

the cumberous "evolutions" of the old French school, through the stiff and stately battle parades of Scott to the quicker and more direct movements of Hardee, and finally to Upton's method of wheeling and its later improvements. Ceremonics and formations in rank have not changed essentially, but a more rational set up has gradually prevailed, and the later drill books record the development of the shelter tent, improved packs and other material conveniences. In the manual of arms can be traced the changes from the smooth bore muzzle loader, through the Minnie rifle and the breech loader to the small bore magazine rifle. The bayonet, which was almost discarded fifteen years ago, has again found its place in our drill, and the old grenade companies may again live in the yet unofficial drill for bombing squads. The ddill regulations have broadened out to include the elements of minor tactics.

COMPLETE LITERATURE

In some instances I have been unable to list all editions of each work. Copies of all of the publications are in my library but for permission to see some editions I am indebted to Messers. J.W.Cheney and J. Edwin Young of the Library of the War College, Washington, D.C., and to the Public Libraries of St.Louis, New York, Boston, Philadelphia, New Orleans and San Francisco.

- 1.-A new manual exercise for the foot. Very useful for the army and militia. New-York: Printed by Hugh Gaine, 1759.
 - The Manual Exercise, as ordered by His Majesty in 1764. Together with plans and explanations of the method generally practiced at reviews and field days, &c., by much the best and completest book of the sort over published in this province, being the same used by all the militia of this, and all the other counties (but the northern district) in this colony.
